

Technology:

The project features a custom CMS to manage users, vendors, and admin operations, with focus on scalability, ease of use, and robust business logic.

User Website - **Next.js**.

Vendor Website – **React.js**

CRM Admin Website – **React.js**

Backend – **Nest.js**

Business summary of the website

It's an online platform where users can discover authentic travel tips for cities and tribal villages across India. The platform also highlights kid-friendly attractions and experiences.

Users can seamlessly send inquiries and connect directly with a wide range of travel vendors — including hotels, tour operators, shops, restaurants, airlines, and ticketing agents — either independently or through the platform's administrative support.

Backend- As a very small start-up, we require a streamlined WordPress-based CMS to efficiently manage the system — enabling us to quickly update content and upload hundreds of images with ease.

It's important to us that the vendor backend remains simple, clean, and user-friendly. That's why we value having a thorough discussion before moving into the design phase.

Our super admin panel is the backbone of the business. Key performance metrics will focus on vendor and customer acquisition and behaviour, as well as inventory and revenue tracking dashboards.

Development Phases

To develop the website - There are two development stages,

First Phase – Entire frontend & backend development excluding Hotels section.

Second Phase - Hotels Sections would be development in second stage after the launch of first stage.

Process of development (pre-coding)

Before coding starts we need to freeze figma designs for all vendors and admin websites. Suggestion can we buy ANIMA.com tool (Pro) for a month and get this process faster. We need to have all admin and vendor backend designs ready before coding.

- User website (all modules) Backend architecture set-up and Finalize of UI/UX for all modules
- Freeze figma designs for all vendors and admin websites.

Operational Summary in bullet points

- Platform for discovering authentic travel tips, city and tribal village experiences, and kid-friendly attractions.
- Users can either buy online or send inquiries and connect directly with vendors (hotels, tour operators, shops, restaurants, airlines, ticketing agents), either independently or with administrative support.
- The CMS enables rapid content updates and **bulk image** uploads.
- Super admin panel provides dashboards for vendor/customer acquisition, behaviour, inventory, and revenue tracking.

Home Page & Major Sections

- **Destinations:** Discover cities and tribal villages across India.
- **Things to Do:** Curated experiences and activities.
- **Kids Page:** Highlights kid-friendly attractions and experiences.
- **Tribes:** Explore unique tribal cultures and local living.
- **Hotels:** Listings with rooms, packages, reviews.
- **Shopping:** Shops, local bazaars, handicrafts.
- **Restaurants:** Local and fine dining options.

Other Key Pages

- **City Pages:** Domestic and International, with unique layouts and grid categories.
- **Attraction Pages:** Detailed listings, images, and information.
- **Things to Do Pages:** Curated activities and events.
- **Restaurants Pages:** Local and fine dining listings.
- **Shopping Pages:** Shops, bazaars, handicrafts.
- **Hotels Pages:** Room, package, and review listings.
- **Airlines Pages:** Airline and ticketing information

User Features

- **Sign-in & Log-in:**
 - o Streamlined sign-in using email, full name, mobile.
 - o Email verification with OTP.
 - o Account recovery (resend OTP, password reset).
 - o Enhanced security: temporary block after 3 failed attempts.
 - o Social login (Google, Facebook).
 - o Password strength indicator.
 - o GDPR/data privacy compliance.

Account Management: Update profile, booking history, points (earn/burn).

Points System:

- o Earn & burn points for admin-published products (Hotels, Things to Do).
- o Points awarded for both Together in India products, and selective partner products.
- o Points assigned per product value; admin can create/modify/delete point rules.
- o Points can be carry forward & be used in the next financial year (carry-forward unless admin-disapproved).
- o No conversion of points to cash.
- o Points utilization report for user and admin.
- o Seasonal promotions for points.
- o No levels or badges at this stage.

Inquiries & Booking:

- o Send inquiries to vendors, book services, and view booking status.
- o Instant booking and confirmation for eligible products.
- **Notifications:** Email and WhatsApp notifications for bookings, points, and promotions.
- **Booking History:** Track all bookings and points activity.

User Reviews & Ratings:

- o **Who Can Review:** Only authenticated users (verified via unique link or bill proof).
- o **Where:** Reviews and ratings for cities, attractions, hotels, tours, restaurants, shopping (not for airlines or ticketing).
- o **Review Content:** Users can write reviews, upload images, and rate experiences.
- o **Rating System:** Grade/score-based (e.g., 1–5 stars) for experiences.

Vendor Registration & Onboarding**Stage 1: Inquiry and Business Plan Selection**

- **Inquiry Capture:** Admin captures vendor details (country, zone, state, city, vendor type).
- **Offline Discussion:** Admin discusses with vendor, fills registration form (category, locations, commission/fee plan, duration, slot allocation, marketing cities, etc.).
- **Commission Plan:** Only for hotels/tour operators. Admin creates vendor account (standalone/multi-location). User can send inquiry or book online; admin segregates price and commission.
- **Fee-Based Plan:** Admin sends dynamic purchase plan (standalone/multi-location, marketing cities, business plan: Free, Red, Silver, Gold). Vendor selects and pays online.
- o **Pricing managed by admin:** By vendor type, city type (Metro, Tier 1, Tier 2), month, and plan.
- **Tailor-made Pricing:** Admin shares pricing page link with successful vendors.
- **Unsuccessful Vendors:** Receive thank-you note via email.

Stage 2: Payment and Account Access

- **Invoice:** All payments generate a unique invoice code, captured with filters (country, zone, state, city, vendor type).
- **Payment Acknowledgement:** Admin approves payment.
- **Welcome Note:** Vendor receives welcome note and account link.
- **Invoice Code:** Determines which products/services are published.

- **Custom Pricing Display:** Admin displays price plans from pricing charts.

Vendor Plans & Features

- **Free Plan:** Admin allocates a slot as desired for free.
- **Red Plan (Economy):** Pre-defined slots, unlimited visitors, one landing page per product, no corporate access, reports provided.
- **Silver Plan (Premium):** All Red features plus corporate access, multi-property management, weekly reports, deals/offers, competition rates intelligence, content writer.

Gold Plan (Upper Class): All Silver features plus top slot in corporate deals, dashboard, daily reports.

Sign-in Process

- **Account Creation:** Vendor creates account after plan purchase.
- **Post Sign-in:** Accept SLA, verify mobile/email, complete registration, upload documents.
- **SLA Acceptance:** Registration complete only after SLA and docs.
- **Account Approval:** Admin approves; vendor receives unique ID.
- **Notification:** Vendor receives email with account and tool links.
- **Content Writer & Salesperson:** Allocated by admin.
- **Registration Tracking:** Admin lists all registrations by type, date, status.
- **No Self-Edits:** Business/management details cannot be changed by vendor without admin approval.

Slot Management (Extensive Details)

Grid Page Structure

- **City Grid Pages:** Attraction, Tours, Hotel, Restaurant, Shopping.
- **Tribal Grid Pages:** Tours, Shopping.

- **Each grid page contains five slot types:**

- Ads Slots
- Upper Class Slots
- Premium Economy Slots
- Economy Slots
- Lower Economy Slots

Slot Allocation & Management

- **Slot Numbering & Color Coding:** Each slot is numbered and color-coded for backend identification.
- **Vendor Assignment:** Vendors assigned to slots with labels/colors for organized display.
- **Customizable Time Slots:** All slots (except Lower Economy) can be manually booked with set time/duration by admin, based on invoice/vendor ID.
- **Slot Expiry:** On expiry, auto WhatsApp/email message sent to vendor and admin. Unanswered products labeled "sold out."
- **Capacity Restriction:** Admin sets slot capacity per city type (Metro, Tier 1, Tier 2).
- **Slot Tracking:** Admin tracks each slot's history (customer details, booking dates).
- **Allocation & Performance:** Real-time tracking of allocated vs. utilized slots.
- **Dashboards/Reports:** Admin can generate and display slot capacity, utilization, and booking trends in graphs/charts.

Pricing & Business Plan Management

- **Multi-Tiered Model:** Pricing managed for all vendor categories, slots, and tools.
- **Subscription & Usage-Based Pricing:** Vendors register for a compulsory grid slot and can buy additional tools/slots.
- **Pricing Factors:** City type, seasonality, region, duration, availability, YOY.
- **Customized Pricing:** Admin assembles pricing based on vendor requirements and city.
- **Create Plan:** Admin can add, modify, delete, and manage business plans/tools for each vendor type (base price, selling price, margin, YOY, discounts/offers).

Product Management (Vendor)

- **Product Pages:** Showcase offerings, promotions, packages.
- **Pricing:** Annual and month-wise pricing for all products.
- **Booking Systems:** Integrated booking and inquiry management.
- **Competitor Analysis:** Competitors' pricing analysis and statistics reporting

User & Vendor Management

- Approve, suspend, delete accounts.
- Manage profiles, documentation, and business details.
- Capture and organize member/vendor data (country, zone, state, city).
- Real-time monitoring of sign-in/log-in activities.
- Detailed reporting on usage and registration trends.

Content & Grid Management

- Create/manage city, grid, and product pages.
- Upload images and content.
- Select grid categories for city pages.
- Simultaneous auto-generation of city/grid pricing pages for slot/inventory management.

Slot Allocation & Pricing

- Allocate slots for different pages/business types.
- Set/manage pricing (subscription, usage, city/season/plan-based).
- Manage discounts, offers, capacity restrictions.
- Real-time allocation and performance tracking.

Corporate Management

- Manage corporate registration/enrollment.
- List corporate accounts by staff strength, with manual adjustments.
- Reporting for corporate HR (registration, inquiries, downloads).
- Corporate pricing for annual business plan vendors.

Booking & Inventory Management

- Track bookings, manage inventory, label sold-out products.

Reports & Analytics

- Dashboards for acquisition, booking trends, slot capacity/utilization, revenue.
- All reports converted to graphics/charts for easy analysis.

Points & Promotions Management

- Create, modify, manage earn/burn points.
- Seasonal promotions, targeted notifications (WhatsApp, email).
- User points report (date-wise utilization for member and admin).

Notifications

- Automated messages to vendors/users (WhatsApp, email).

Compliance

- GDPR and data privacy compliance.

Backend (Nest.js)

- Secure authentication protocols (OTP, social login, password strength, logout).
- Data validation, privacy, and GDPR compliance.
- Real-time booking/reservation and notification systems.
- Analytics and reporting with graphical dashboards.
- CRM and email marketing integration.
- Scalable, modular architecture.

User Personas

Traveller / End User

Description:

Individuals and families (including parents with children) seeking authentic travel experiences, city and tribal village tips, and easy access to bookings for hotels, tours, attractions, shopping, and restaurants.

Key Behaviours & Needs:

- Discover and explore destinations, things to do, and kid-friendly attractions.
- Use streamlined sign-in (email, OTP, social login), with secure account recovery.
- Browse city pages (domestic and international), grid pages for different business types.
- Send inquiries and book directly with vendors or via admin support.
- Earn and redeem loyalty points on Together in India's self-published products (e.g., hotels, tours).
- View booking history and points utilization.
- Receive notifications and promotional offers via email/WhatsApp.
- Benefit from seasonal promotions and transparent booking processes.
- Expect GDPR-compliant data protection and privacy.

Travel Vendor

Description:

Businesses such as hotels, tour operators, shops, restaurants, airlines, and ticketing agents who wish to advertise and sell their services/products on the platform.

Key Behaviours & Needs:

- Register via a two-stage process: inquiry/business plan selection, then payment/account setup.

- Choose from tiered business plans (Free, Red/Economy, Silver/Premium, Gold/Upper Class) with features and slot allocations varying by plan.
- Upload business documentation, accept SLA, and await admin approval for account activation.
- Manage business profile, product listings, and promotions.
- Purchase and manage slots on various grid pages (attractions, hotels, tours, restaurants, shopping, airlines), with options for customizable time slots and real-time slot tracking.
- Track slot expiry, receive notifications, and see “sold out” status for expired slots.

Access analytics, booking reports, and competitor pricing insights.

- For hotels/tour operators: Option to operate on a commission-based plan with admin-managed commission splits.
- For all vendors: Access to content writers, sales support, and periodic performance reports as per plan.
- Cannot self-edit core business/management details without admin approval.

CRM Admin / Platform Administrator

Description:

Super admin or platform management staff responsible for system operations, content, user/vendor management, pricing, analytics, and compliance.

Key Behaviours & Needs:

- Oversee all user and vendor registrations, approvals, and documentation.
- Manage city and grid page creation (including domestic/international layouts and grid category selection).
- Allocate and track vendor slots (across Ads, Upper Class, Premium Economy, Economy, Lower Economy) with full control over slot timing, expiry, capacity, labeling, and color coding.
- Monitor slot utilization, generate real-time dashboards and analytics (capacity, booking trends, revenue, vendor/customer acquisition).
- Configure and manage business plans, pricing (subscription/usage-based), discounts, and offers.
- Handle corporate account onboarding, pricing, and reporting (including HR reporting).
- Manage product pages, pricing, booking systems, and competitor analysis tools.
- Oversee points and promotions (creation, modification, assignment, seasonal offers).
- Ensure GDPR/data privacy compliance and secure authentication protocols.
- Assign content writers and salespersons to vendors as needed.
- Respond to and resolve vendor/user queries and escalations.

Corporate HR / Corporate User

Description:

HR managers or travel coordinators from registered corporate clients, responsible for enrolling staff and managing corporate travel arrangements.

Key Behaviors & Needs:

- Register and manage corporate accounts via dedicated forms.
- Enroll staff, track registrations, and manage inquiries/downloads.
- Access corporate pricing options and deals (especially for vendors with annual business plans).
- Access reporting tools for HR and travel analytics.
- Communicate with admin for account adjustments and support.

Content Writer & Sales Support (Admin-assigned)

Description:

Platform-assigned personnel who support vendors in content creation and sales enablement (as per vendor plan).

Key Behaviors & Needs:

- Collaborate with vendors to create and optimize product pages.
- Assist with promotional content, offers, and updates.
- Provide sales guidance and performance feedback to vendors.
- Additional Sales will be able to create and maintain list of vendors. Create & share weekly, monthly sales reports, allocate targets vs actual sales directly to super admin.

Operational flow & development in detailed

(Same as above)

1. Sign-in & Log-in Forms

- a. Front-end development to include a streamlined sign-in process, email verification with OTP, user-friendly account recovery options, and enhanced security with temporary account blocking after 3 incorrect password attempts.
- b. Back-end development to capture comprehensive member data, enable real time monitoring of sign-in/log-in activities and generate detailed reports. (all reports will be converted into graphics)

2. Vendor Registration Process

- a. Two Stages registration process: Inquiry and Business Plan Selection, followed by Payment and account access.
- b. Vendor Plans (Red, Silver and Gold) this will determine product allocation, features and pricing payable online to admin.
- c. Post-registration requirement includes SLA acceptance, account approval and unique ID generation.

3. City types – There are two types of city page designs – one for **Domestic cities** and another for **international cities**. While creating a city page admin will have an option to select its grid categories too. Depending upon city's size and geo location admin will have option to select all or as required grid categories.

Note: As admin will create a city page & its grids, simultaneously under Price management, similar city & grid pricing pages will get auto generated wherein slot pricing & inventory management will be done.

4. Grid Page Structure

- a. Grid Pages are categorised by city with subcategories for different business types (attractions, hotels, tours, type of foods & restaurants, & so on.
 - b. Each grid page contains allocation slots for vendors, categorised by class (Ads, Upper Class, Premium Economy class & Economy class)
 - c. Backend features from grid management includes
 - customizable time slots – All slots will be manually booked based on entering invoice & vendor ID. Admin will be able to set time & duration to each slot (except Lower economy slots). On expiry of timeline an auto WhatsApp message will be flashed to vendor & admin. Unanswered products will get “sold out” labelled.
 - Slot label & colour – All slots will have serial no labelling & slot colouring.
 - Capacity Restriction – Based on city type, admin will be able to set capacity restriction.
 - Tracking – Admin will be able to track history of each slot - customer details, dates of booking period.
 - Allocation & Performance - Admin will be able to track real time allocation of the capacity vs utilized slots.
- Dashboard & reports - Admin will be able to generate & display reports & analytics of capacity, utilization & booking trends of slots in graphs & charts.

Corporate Management

1. Admin manages corporate registration forms and enrolment processes.
2. Corporate accounts are listed based on staff strength, with manual adjustments possible.
3. Reporting on registration, inquiries and downloads provided to corporate HR department.
4. Corporate pricing option are available for vendors with annual business plans.

Hotel, Tours, shopping & Restaurants

- a. Specific registration, vendor login and management details pages for each business type.
- b. Product pages to showcase offerings, promotions and packages
- c. Features like product annual & month-wise pricing, booking systems, enquiry management, competitors pricing analysis and stats reporting.

Additional Considerations

- a. Integration of social Media login options.
- b. Implementation of a password strength indicator.
- c. Compliance with data privacy regulations. (e.g GDPR)

Technical Considerations

- a. Secure authentication protocols
- b. Data validation checks
- c. User-friendly interface designs
- d. Flexible pricing systems
- e. Real-time booking and reservation systems.
- f. Data analytics and reporting functionalities.
- g. Integration with CRM and Email marketing

This list provides a high-level overview of the key development points outlined with the document. Each point will have a detailed technical specifications and implementations plans which are describe in my scope of work report.

Sign-in & Log-in Forms

Frontend

- a. Streamlined Sign-in: Members can easily sign-in using their email address, full name and mobile number.
- b. Email verification: To ensure security, new members will receive an email with a One-Time- Password (OTP) to verify their email address.
- c. User-Friendly Account Recovery: The sign-in process includes options to resend the OTP, recover forgotten passwords, and reset existing passwords.
- d. Enhanced Security: For added security accounts will be temporality blocked after three incorrect password attempts.

Back-end

- a. Comprehensive member Data: The admin dashboard will capture and organize new members data by country, zone, state, and city, providing valuable insights into members demographics.
- b. Real-time Monitoring: Admin will have access to real-time monitoring of all sign-in and log-in activities, enabling them to track usages patterns and identify portentil security threats.
- c. Detailed Reporting: The system will generate detailed reports on sign-in and log-in activities, allowing the admin to analyze trends, identify peak usage times, and optimize system performance.

Additional considerations:

Social Media Login: Consider integrating social media login options (e.g Facebook, Google) for a faster and more convenient sign-in experience.

Password Strength Indicator: Implement a password strength indicator to encourage members to create strong, secure passwords.

GDPR Compliance: Ensure that all data collection and processing practices follow relevant data privacy regulations (e.g GDPR)

Vendor Registration Process

This document outlines the registration process for vendors who wish to advertise their products or services on the platform.

- a. **Registration overview:** All new vendors register through the “Advertise with Us” page , which uses a common form to capture basic details for all vendors types (refer to the Figma design for the form layout). The registration process consists of two main stages:

Stage 1: Inquiry and Business Plan Selection:

1. **Inquiry capture:** The admin captures inquiries based on the vendor’s country, zone, state, city and vendor type.

2. **Offline Discussion & Form:** The admin conducts an offline discussion with potential vendors to determine suitability. All details of the discussion will be captured on a registration form controlled by admin. This process includes vendor category, standalone or multi-locational, commission or fees-based plan, duration, slot allocation, desired marketing cities & so on.
 - **Commission Based Plan** – Commission plan is only applicable to Hotels & Tour operators. Admin will create a vendor account under which will register standalone or multilocation business accounts. User will send inquiries directly to admin or can buy online. Admin will segregate price & commission.
 - Upon submission, the admin will share the member's details with the vendor. User will get instant book and confirm status for his reservation. Upon submission, the admin will share the member's details with the vendor.
 - **Fees based Plan:** Based on business discussion & requirements such as vendor type & the marketing city opted by him, admin will send dynamic purchase plan form to the vendor. This will include list of standalone or multi-locations of the vendor, marketing cities opted, & the business plan highlighting (free, red, silver & gold plans). Vendor can select & pay online for the desired plan.
 - All fee-based pricing will be managed by admin based on vendor type - city type – Metro, tier 1 & tier 2 & month wise - further split into plans - (Red, Silver or Gold). The Chosen plan will determine product allocation on the grid pages.
3. **Admin to Share tailor made Pricing Page** with all successful vendors through a link via an email. The tailor-made pricing page will display business details along with its pricing.
4. **Unsuccessful Vendors:** Unsuccessful vendors receive a thank-you note via email.

Stage 2: Payment and Account Access:

1. **Invoice:** All online/scan payments received will generate invoice with a unique code. And will be captured by admin under filters - Country, Zone, state, city & vendor type
2. **Payment Acknowledgement:** The admin acknowledges and approves the payment.
3. **Welcome Note:** The vendor receives a welcome note with a link to sign in to their account.

Note: The invoice unique code will determine the publish of a product or services across the website.

II

Note: For each vendor enquiry, admin will be able to customise & display price on price plans directly fetched from pricing page charts as selected.

III. Vendor Plans and Features

Vendor plans determine product allocation and access to features:

- a. **Free Plan:** The admin allocates a slot as desired for free.
- b. **Red Plan:** (Economy Class) Vendors are allocated pre-defined slots. Features include unlimited visitors and one landing page per product page. And other usps of the product display. No corporate access. Reports are provided.

- c. **Silver Plan:** (Premium Class) Includes all features of the Red Plan plus corporate access, multi-property management, weekly reports, the ability to design deals and offers, competition rates intelligence, and offers, and a designated content writer.
- d. **Gold Plan:** (Upper Class) Includes all features of the Silver Plan plus a top slot in corporate deals listing (accessed by corporate users only) a dashboard, and daily report updates. (view all features on the vendor enrolment plan page)

IV. Sign-in Process:

1. **Account Creation:** After purchasing a plan, the vendor creates a sign-in account.
2. **Post Sign-in Requirements:** The vendor must accept the service level agreement (SLA) document, verify their mobile and email addresses, complete the registration form and upload the required business documentation.
3. **SLA Acceptance:** Registration is complete only after the vendor accepts and submits the SLA & documents.
4. **Account Approval:** The vendor can access their account once the admin approves it.
5. **Unique ID:** Approved vendor receives a unique ID number for tracking their business activities.

V. Post Registration:

1. **Notification:** Upon successful registration submission, the admin notifies the vendor via email with a link to their account and other pages such as tool page.
2. **Content Writer and Salesperson Allocation:** THE admin allocates a designated content writer and a salesperson to the newly approved vendor.
3. **Registration Tracking:** The admin captures and lists all new registration requests by vendor type, date, and status.

VI. Notes

All businesses and management details once loaded, cannot be amended or changed by the vendor without admin approval.

VII. Earn & Burn Point System:

– **Self-published Products** - Earn & burn points are awarded to members on products directly published by admin - Hotels & Things to Do.

-
- **Manage Points:** Admin will create, manage, modify & delete earn & burn points to members as Sign-in points, promotional points, purchase earn & burn on tour & hotel.
 - **Assign of points:** Admin will assign both earn & burn points based on per product value which will vary on the product selling value.
 - **Member will earn points** whenever they buy online Together in India product. No points will be award on travel partners products.
 - **During the transection,** allocated earn points will be added to members account & burn points will be deducted from member's account after member's approval. Earn & burn points limits will be created & monitored by admin. Admin will track all transections & will notify member via WhatsApp & email.

- Expire Points – The points earned by members within a financial year has to be burned the same year, no carry forward of the points until approved by admin. No conversion of points to cash.
- User Points Report – Each member will have utilization point table date wise where both member & admin can get an overview of all the points the member has earned and redeemed.
- Admin can create seasonal promotions wherein admin can reward point to selective members or at large.
- At this stage there is no level & badges.

Grid Page Structure

This section details the structure and organization of grid pages within the platform.

- I. **City Grid Page Types:** There are five main types of grid pages:
 - Attraction Grid Page
 - Tours Grid Page
 - Hotel Grid Page
 - Restaurant Grid Page
 - Shopping Grid Page.
- Ib. **Tribal Grid Page Types:** There are two main types of grid pages
 - Tours Grid Page
 - Shopping Grid Page
- II. **Grid Page Slots**

Each grid page contains five types of slots

 - Ads Slots
 - Upper Class Slot
 - Premium Economy Slots
 - Economy Slots
 - Lower Economy Slots

Note: Each slot is allocated a number for identification and organization within the backend system.
- III. **Vendor Allocation:**

Each vendor type is assigned a grid page with labelling slots & colouring of slots in the backend for identification. This allows for organized display and management of vendor listing.

Post-Registration Data Management and Business Plan features

This section outlines the administrative functionalities related to vendor registration data the management of the business plans.

- I. **Post Registration Data**

The admin will capture data for all vendor registrations, both successful and unsuccessful.

This data will be organized by:

- Date
- Country
- Zone
- State
- City
- Vendor type

This comprehensive data collection allows for detailed tracking and analysis of vendor registration trends and patterns.

II. **Business Plan Page for all vendor category: Backend Features.**

The plans are featured for standalone & multi-location type vendors.

The admin has extensive control over the Business Plan page through the following backend features:

- **Multi-tiered model** - It's a multi-tiered pricing model – monitoring all types of vendors categories slots & their tools pricing. Pricing for both slots and tools will be determined based on cities they wise to market online – Metro, tier 1 & tier 2.
- **Pricing model** – Our pricing model would be subscription-based pricing. Here, vendors after registering a compulsory grid slot - if keen to amply their product, then can buy tools (slots) across the website.
- **Usage-based slot pricing** – it's a usage-based pricing - Per slot & tool price under all vendor categories will be defined based the type of city, seasonality month & region wise, duration length, availability & YOY.
- **Customized pricing** - Admin based on the off-line discussion with the vendor will assemble the product pricing based on their requirements & the city they wise to business.
- **Create Plan**: Create, add, modify, delete and manage business plan & tools for each vendor type based on base price, selling price, profit margin percentage, YOY plus will be able to offer discounts & offers.
- **Standard pricing** – Standard pricing for business plan & tools would be 1 Month, annual paid monthly or annual prepaid for all categories.
- **Monitor Plan**: Update, amend, add, and delete plans & its pricing and benefits.
- **Pricing Plan**: Add, delete, modify and list pricing plans – **1 Month only, Annual, paid monthly or annual prepaid** for all categories.
- **Offer deals & discounts on plans**, and label them with availability and marketing status such as most popular & so on. Admin will be able to hide price of a plan and ask user to contact Sales. Admin will also be able to add strikethrough price to highlight discounts & promotions or sold out.

III. **Pricing Management of Slots & tools**

- **Listing of slot Pricing** - Admin will manage & monitor listing of slot pricing across the website pages, city & tribal pages, both categories of kids (all pages where all a slot is allocated) Pricing list will have base price, selling price, profit margin percentage, YOY.
- **Listing of Tool Pricing** – Admin will manage & monitor listing of all tools pricing based on types of vendor & cities they wise to market. Pricing list will have base price, selling price, profit margin percentage, YOY & gross profits country, zones, vendor type & city wise.

IV. **Inventory Revenue & slot Management.**

- Inventor listing – Admin will manage & monitor inventor of the entire website on one screen both through a dashboard & listing page.
- Inventor listing – Admin & sales will be able to book, confirm, waitlist & delete all slot entries & manage all available slots across the website.
- **Invoice Summary Page:** Auto-generate invoice summaries based on the plans, tools and services selected by the vendor. All invoices are captured using a unique code.
 Technical Considerations: For all types of vendors, design the Plan page to showcase prefix allocated cities along with rates.

User Management and Role Management.

This section outlines the difference user roles and their corresponding permissions within the system.

I. User Roles.

The platform supports four distinct user roles.

1. **User:** A regular visitor who can access the website without registration.
 - V. Call to Action: When users encounter a call to action, they are prompted to sign-in for membership.
 - VI. They can choose to register or continue without registration.
 - VII. Membership Benefits: A pop-up window displays membership benefits.
2. **Content Writer:** Responsible for creating and managing website content.
 There are two types:
 - VIII. Centralized Content Writer: Accesses and manages static content, including website pages, blog posts, and email content. Can create, edit and delete pages across the website and has access to user membership data.
 - IX. Vendor Content Writer: Has region wise login divisions (International – Country wise, National – North India, South India, East India, West India and Central India)
 - X. Each division has at least two logins, with the provision to add more. These writers can load, edit, and delete content, images, menus, and videos on vendor landing pages. They can access vendor product pages by entering Vendor ID and product ID. All actions are logged by the admin, with details including date, time, product, and content writer password.
3. **Admin:** Manages various aspects of the platform.
 - XI. Sub-Admin Creation: Can create sub-admins for specific countries, zones, or states to manage location specific tasks.
 - XII. Sub-Admin Management: Can add, modify, delete and view the list of sub-admins.
 - XIII. Filter and form Management: Can add, modify, and delete filters, sub-filters and forms across the website.

- XIV. Content Access Control: Can control content access permissions for sub-admins based on country, zone (North, South, East, West, Central & Pan India) and international country or regions wise.
- 4. **Super Admin:** Has the highest level of access.
- XV. Full Access: Two Super Admin logins have access to the entire website, including data & pricing.
- XVI. Restricted Access: One Super admin login can access the entire website except the data and pricing sections.
- XVII. Role Management: Can add, edit, and delete roles for staff within the defined structure (content writers, vendor content writers and Sales)

Grid Management

This section details the structure, creation process, and management of grid pages within the platform.

I. Grid Page Categories

Grid pages are categorized by:

- City
- Tribal Village

II. Grid Page Subcategories

Each location category can have a following subcategories of grid pages:

- XVIII. Attraction Grid Page
- XIX. Hotel Grid Page
- XX. Tour Grid Page
- XXI. Shopping Grid Page
- XXII. Restaurant Grid Page

III. Grid Page Creation Process

- XXIII. Country & State Grid Pages: The admin creates and lists city & village pages along with corresponding grid pages. The type of city (Metro, Tier 1 or Tier2) determines the allocated grid pages (attractions, hotels, tours, restaurants and airlines banners). The admin can choose to include all grid page subcategories or a selection or none.
- XXIV. City Attraction Grid Page: The admin lists attractions (within and outside the city) on a grid, managed by filters and sub-filters. Each allocated attraction has a permanent, pre fixed slot on the grid. The admin can drag and drop slots to change their sequence, add new attractions or delete existing ones.
- XXV. City and Tribal Vendor Grid Pages: The admin lists vendor grid pages for cities and tribal areas based on the following parameters:
- XXVI. City Types/Number of Slots:

- a. Metro: 2 sponsored slots and 60 allocated slots for each grid page type.
 - b. Tier 1: 2 sponsored slots and 50 allocated slots for each grid page type.
 - c. Tier 2: 2 Sponsored slots and 30 allocated slots for each grid page types.
 - d. Tribal: 2 sponsored slots and 10-16 allocated slots for each grid page types.
- Parameters: The admin manually creates grid pages based on city type, slot allocation, sponsored slots, and other relevant parameters. The admin can modify, add, or delete slots on each grid page type based on demand too.

Parameters: The admin manually creates grid pages based on city type, slot allocation, sponsored slots, and other relevant parameters. The admin can modify, add, or delete slots on each grid page type based on demand.

IV. **Types of Slots.**

Slots on grid pages are labelled and coloured according to four categories:

- XXVII. Ads Slot (First two rows)
- XXVIII. Upper – Class slot
- XXIX. Premium Economy Class slots
- XXX. Economy Class Slots
- XXXI. Lower Economy Class Slots

V. **Backend Features**

XXXII. Slot Labelling: Each slot on a grid page has a fixed allocated label (e.g A-1, A-2, A-3)

XXXIII. Manual Linking: The admin or staff (writer or sales) manually link slots to vendors by entering their ID, Vendor ID and product ID.

XXXIV. Slot booking Status: A slot can be booked following status:

- a. Time Limit bases: (OK). This slot will be allocated to a vendor on time limit bases.
- b. Confirmed: (NN) This slot is a definite slot, where payment has been received.
- c. Waitlisted: (WL) This slot will get listed when an OK slot has more vendors to buy.

The list will show all the interested vendors date and time wise.

XXXV. Allocation Tracking: All slot allocations are captured and listed by date, country, state, city, vendor type and booking status.

XXXVI. Slot Categorization: Different slot categories (Gold Class, Premium Economy, Economy & Lower Economy) are labelled and coloured differently.

XXXVII. Slot Fixation: Once a slot is allocated, it is permanently fixed, except for Lower Economy, which can move within their designated rows.

Corporate Management

This section outlines the processes and functionalities related to managing corporate accounts on the platform.

I. **Corporate Forms:**

Form Management: The admin can create and manage the form used for corporate registration. This includes adding, editing, deleting and updating form fields. There is one standardized form for all corporate registrations.

II. Corporate Enrollment and Listing Process

XXXVIII. Request form: Corporate initiates the enrolment process by filling out request form linked to the Corporate Business Page.

XXXIX. Account Creation: The admin creates a corporate account based on the information provided in the request form. This includes:

- a. Corporate name
- b. Authorized person's name, contact no, and email details.
- c. Head office address
- d. Number of branches and staff strength per branch and total.
- e. Business URL
- f. Acceptance of terms and conditions and privacy policy.

XL. Code Generation: The admin generates individual codes for each branch under super code assigned to the head office.

XLI. Data Collection: The admin collects all relevant data from the corporate registration form.

XLII. Corporate Listing: Registered corporates are listed based on their staff Strength:

Level A – Above 250 Staff

Level B – 101- 250 Staff.

Level C - 51-100 Staff

Level D – 1- 50 Staff.

Note: Admin can manually adjust a corporate's level based on preference, or the total number registrations and business inquiries.

III. Reporting

XLIII. The admin monitors and informs corporate about the total number of registrations, inquiries and downloads. Broken down by branch, and reports this information to the HR department as advised by corporate authorities.

IV. Corporate Pricing

XLIV. Vendor Access: Vendors who have purchased an annual business plan or corporate access will have an access to corporate pricing option on his product pages.

XLV. Pricing Fields: All types of vendors Hotel, tour, restaurants & Shopping vendors can opt to offer one or more corporate listing levels with associated discounts in their product pricing section. Restaurants and shopping vendors additionally can offer Promo-codes referring to Corporates too.

V. Latest Corporate Listing

XLVI. Dedicated Page: All corporates' users have access to a "Latest Corporate Discount" Listing page within their login account.

XLVII. Vendor Slots: Vendors can purchase slots on the "Latest corporate discounts" page. The admin will allocate these slots.

Hotel

Hotel Registration:

- XLVIII. Vendors can register after a successfully filling in company details an accepting business terms and conditions.
- XLIX. Successful vendors gain access to product pages where they can select their business models and enter product details such as room type, amenities, images, rack rates, special rates, discounts, Admin commission, last-minute deals, early bird offers, GST taxes and more.
- L. Technical considerations: Implement secure authentication protocols to protect vendor information during registration and ensure compliance with data privacy regulations.

Performance Dashboard:

- LI. Displays vendor ID & Date of Joining.
- LII. The performance dashboard displays performance reports yearly, monthly & weekly basics for the top 5 locations.
- LIII. The dashboard displays the total number of visitors, inquiries, drop inquiries and online bookings.
- LIV. Common Message Screen: This is where the admin can send greetings and business notifications from the super admin collectively or individually.
- LV. Technical considerations: Design the dashboard to provide vendors with key performance indicators and insights into their business of all branches on the platform. Implement data visualization tools to present data effectively which vendors can filter as desired.

Management Detail Page:

- LVI. Welcome business Note
- LVII. Content list of required documents listing.
- LVIII. Business Name and Logo Fields
- LIX. Two Ownership names and mobile numbers, WhatsApp numbers, and contact fields – add partner option.
- LX. Tick-click for accepting terms and conditions & private policy for doing business – create account.
- LXI. Technical Consideration: Design the account creation process to be user-friendly and capture all necessary information. Implement security measures to protect sensitive data.

Business Details Page:

- LXII. Business ID: Created by admin and auto-fetched.
- LXIII. Business email & phone contact fields
- LXIV. Business Type: Standalone or Multi-chain
- LXV. Address fields
- LXVI. Taxation details: GST Number with a tick option “My business doesn’t have a GST number.

- LXVII. Documents loading: Features to load GST documents and address proof.
- LXVIII. Technical consideration: Implement data validation check to ensure data accuracy and consistency.

Property Section Page:

- LXIX. This page displays fields for single/multi branches with their types.
 - LXX. All are registered independently but listed under one main ID umbrella account.
- Note: All properties will be managed from one login.
- Technical Consideration: Design the system to accommodate both single and multi-branch hotels, allowing for centralized management and reporting.

Landing Page:

There are three types of hotel landing pages –

- LXXI. Day wise Room & Last minute – This page will display all room categories with options of displaying per night rates with or without meals & additional services. Page will also have an option for users to select various in-house services.
- LXXII. Day wise Early Bird Room – This page will display all room categories with options of displaying per night rates with or without meals & additional services. Page will also have an option for users to select various in-house services.
- LXXIII. Day wise Package Room– This page will display all room categories & its price package wise, example - 1 night, 2 night, 3 nights, 4 nights and so on. Page will also have an option for users to select various in-house services.

Common features: Each landing page will have individual - location section, property policy, booking summary form, pricing calendar, payment policy.

Room Upgrade:

- LXXIV. On landing pages, once user selects a room type, admin will have an option to display an upgrade room pop-up asking user to opt for an upsell category.

Note: - Under Fees based plan a user will be able to send direct enquiry to the hotel through a form, 3rd party transfer. And under commission-based plan a user will be able to send enquires to admin.

Product Page loading:

- LXXV. Vendors & content writers both can load their product page.
- LXXVI. Vendors can load logos, and images enter star categories, Create and fill types of rooms, select room amenities, hotel amenities, define the number of rooms per room category and price, extra guest price, room package duration & price, salient features of the hotel, Hotel's target market (e.g – honeymooners, family, couples, Yoga lovers and so on.), payment plan & terms and conditions. (refer figma design)

Back-end:

- LXXVII. Icons - All Hotel and room amenities backend will have tick selections where the vendor can select amenities by identifying them via icons and labels.
- LXXVIII. All Deals and Offers section: Vendors can list their deals by selecting prefixed offer language. Or else can edit too.
- LXXIX. All customize your holiday amenities backend will have a tick selection along with self-defining option where the vendor can select content.

Technical Considerations: Design the landing page to showcase hotel details effectively, including images, descriptions, amenities, pricing and target market information.

Pricing Management:

- LXXX. Room Type & Pricing: All room types will have rack rates, selling rates, corporate rates with option of meal plans (EP, CP, MAP & AP) & other services which can be combined like a combi price.
- LXXXI. All pricing will have additional features to add taxes, commission & other fees.
- LXXXII. Vendors can create, publish, amend, discontinue deals & offers with duration, number of deals validation & a promo code.
- LXXXIII. Regular Selling – Vendor can opt regular selling from his dashboard, where they can create, modify and delete multi rooms types and offer direct pricing to users. Users by filling their request form can book & attain instant confirmation. Users will receive instant confirmation via email and Whatsapp on timeline basics. Or users can fill the form to start a process of their booking directly with the hotel.
- LXXXIV. Early Bird Deals – Vendors can opt for Early Bird Deals for their dashboard, where they can create, modify and delete Early Bird Deals by offering special prices, seasonality, and pre-defined total deals counts. **Users can book on-line & pay at the hotel.** Users will receive instant confirmation via email & WhatsApp. (instant confirmation yet direct selling). Or a user can fill the form to start a process of their booking directly with the hotel.
- LXXXV. Last- Minute Deals – Vendors can opt for Last-Minute Deals from their dashboard, where they can create, modify and delete last-minute deals by offering special prices, duration timelines, and pre-defined total deals counts. **Users can book on-line & pay at the hotel.** Users will receive instant confirmation via email and Whatsapp. (instant confirmation yet direct selling). Or a user can fill the form to start a process of their booking directly with the hotel.
- LXXXVI.
- LXXXVII. Customize your holiday – Vendor can opt to sell additional services from his dashboard, wherein he can create a service, offer rack rate, discounted & special rates. Vendor will have access modify & delete these as & when required. **User can select & book** any services by ticking. All selected service & price will get displayed on form/invoice. User will have a final option to select or deselect any services on invoice/form page.

Technical Considerations: Implement a flexible pricing system that allows vendors to define different pricing structures based on various factors such as room type, seasonality, month wise, meal plans, individual user promo-codes, and corporate rates.

Deal Listing Page

- LXXXVIII. The vendor will create multi types of deals (Early Bird Deals, Last Min Deals, Weekdays Deals, Couple deals) as and when required. Selected created deals after approval with pre-conditioned authority to automatically get displayed on the Together 23 Deal section on Home Page. Not all vendors will have this access.

Technical considerations: Design the deal listing page to showcase various deals and their terms & conditions.

Membership Plan Purchase & Invoicing

LXXXIX. Membership Plan: All vendors must enrol by purchasing a membership plan (free, Red, Silver, & Gold) with the option of one month only, Annual paid monthly, or Annual prepaid) Based on the plan vendor slot allocation will be defined.

Backend:

XC. Admin will capture all vendors inquiries and opt status date-wise.

Technical Considerations:

XCI. Implement a secure online payment system and integrate it with the invoicing module.

Enquiry Dashboard.

XCII. All enquiries will land on the vendor dashboard.

CRM Features:

XCIII. Preview & labelling of email: All user inquiries made by users for room bookings will be listed by date and labelled (e.g New Booking) .

XCIV. Automatically Vendor system to be able to send Hotel welcome kit, hotel location, hotel voucher and city PDF directly to the guest a day in advance. (Our city PDF is inhouse designed) so they can internally attach.

XCV. Automatically Admin to be able to send a review form to the guest on the day of his check -out.

XCVI. All room confirmation, amendment and cancellation details to send to user, vendor & admin via email & Whatsapp as and when actioned.

Competitor Pricing Page

Backend:

XCVII. Hotel Competitor Pricing: Admin will capture, list & display all hotel pricing based on category, area and city.

XCVIII. Admin will capture, list & display (via pop-up) all hotel offering deals along with regular pricing based on category, area and city.

XCIX. Admin will set and monitor hotel category wise the lowest and highest pricing bar.

Technical Considerations

C. Implement a system for capturing and displaying competitor pricing & deal offering information, ensuring data accuracy and relevance.

Stats Report Page

CI. Stats Report of the total number of visitors and their behaviour across all vendors display locations on the website.

CII. Search Views, several inquiries, download, landing pages views & bounce back.

- CIII. Promoted Listing Views, Upper-Class views, Premium Economy Views, Economy Views, Lower Economy, Popular Listing views & other tools.

Note: All above stats will be displayed under filters as of Today, Current week, Last Month and by date.

Technical Considerations: Implement data analytics and reporting functionality to provide vendors with comprehensive insights into their performance on the platform, including user behaviour, marketing tool effectiveness and competitor analysis.

Reservation Process and Revenue Management

Frontend

- CIV. Vendors can list room-per-night pricing and deal-based pricing.
- CV. Room & deal-based pricing: Vendors can list yearly pricing by month and room type. In addition to day-wise pricing, vendors can offer various types of deals such as Early Bird, Last Minute, and other special offers. Vendor can set conditions for purchasing deals, including duration and the total number of inquiries.
- CVI. Calendar date-wise pricing: All per-night pricing will be displayed on a monthly calendar by room and meal plan. Vendors can display the lowest per room price in green and the highest in red. Vendors can block a specific-dates or mark them as sold out.

Technical Considerations:

Implement a flexible pricing system that allows vendors to define different pricing structures based on various factors such as room type, seasonality, meal plans, customise your holiday section and deal types.

Call To Book

Front-end

There are 3 types of “Call to Book” types

- CVII. Select button - Booking via Summary Page: Users can buy online via a summary page with an option of pay online or at the hotel. If paid online admin will segregate price & commission. If paid at the hotel, then admin will keep commission track.

Upon submission, the admin will share the member’s details with the vendor. User will get instant book and confirm status for his reservation. Upon submission, the admin will share the member’s details with the vendor.

- CVIII. Call Hotel Button – Call hotel, here user has two options – selling price & AVG Price. selling price is the real price visible to user. Whereas Avg Price is a rough estimated price. Under both a user can directly call the hotel to confirm price & booking. On successful interaction, use can send his personal details to the hotel. The admin will capture the total number of actions & will share the member’s details with the vendor.

- CIX. 3rd Party transfer Button: On call to action, a user will be transferred to the desired 3rd party website. The platform services end here except for capturing the total number of actions.

CX.

Technical Considerations: Implement tracking mechanisms to monitor user actions and measure the effectiveness of 3rd party transfers.

CXI.

Back-end

- CXII. Enquiry Inventory listing: For both type of “Call to book” vendor will have to allocate number of enquires & a time frame. In case booking clicks succeed the define number of enquires, admin will send an alert to vendor to entire redefine limit failing, the room it will automatically get labelled as sold off.

Technical Considerations:

- CXIII. Design the inquiry & booking form to capture relevant user information and facilitate communication between users, admins and vendors.

Corporate Pricing

- CXIV. The admin or vendor can offer discounts on rooms and packages based on predefined corporate levels. When a corporate staff member logs in and makes a booking, they will receive the pre-defined corporate price.

Technical considerations: Implement a system for managing corporate pricing levels and automatically applying discounts to eligible bookings.

B2B Pricing

- CXV. The admin or vendor can offer individual discounts to end number of sub-agents based on the promo-codes predefined to the sub-agents by the vendor. When a sub-agent logs in and makes a booking, they will receive the pre-defined sub-agent promo-code price.

Technical considerations:

Implement a flexible pricing system that allows vendors to define different pricing structures for sub-agents based on permanent promo-codes while creating a booking.

Other Features

Multi-Property Management System

- CXVI. One-screen reports of occupancy and performance of a chain of multi properties (day-wise, week, month & year-wise).

Technical consideration: Design the system to provide consolidated reports and centralized management for multi-property vendors.

Central Reservations

CXVII. One landing page for all leads, follow-ups, reservations & cancellations.

CXVIII. Technical considerations: Develop a centralized reservations system that provides a united view of all bookings-related activities.

Tours

Tour Operator Registration

CXIX. Similar to Hotel registration, tour operators will need to register their businesses on the platform, providing essential information.

Technical considerations:

CXX. Implement user roles and permissions to differentiate between tour operators (domestic to domestic tour, domestic to international tour & International to Domestic tours)

Vendor Login Pages

Dashboard:

CXXI. The tour operator dashboard will provide access to performance reports, marketing tools, and communications features, tailored to their specific needs.

Technical Considerations:

CXXII. Design the dashboard to display tour-specific metrics, such as type of tour bookings

Domestic to domestic – Sightseeing and Multi Day tours of within India

Domestic to International – Sightseeing and multi-day tours of an overseas destination.

Inbound – Sightseeing and multi day tours of India for overseas users.

Management Details Page

CXXIII. The management details page for tour operators will capture information about the tour company's ownership, contracts details, and relevant licenses or permits.

CXXIV. Technical considerations: Implement data validation checks to ensure data accuracy and consistency.

Business Details Page

CXXV. The business details page for tour operators will capture information about the tour company's specialization (e.g sightseeing or multi-day tour with further by interest - adventure tours, cultural tour, kids tour and so on) area of operation, area of marketing product and GST status.

Technical considerations – Implement data validation checks to ensure data accuracy and consistency.

Business Type Page:

CXXXVI. This page will display fields for single/multi branches with their type.

CXXXVII. All are registered independently but listed under one main ID umbrella account.

CXXXVIII. Note: All deals & coupons are managed from a single login.

CXXXIX. Technical Considerations: Design the system to accommodate both single and multi -branches tours operators, allowing from centralized management and reporting.

Product Page

CXXX. Tour Listing & features

CXXXI. - Product listing includes loading of content, images, videos, logo, itinerary, pricing and availability.

Technical considerations: Design the product pages to showcase tour details effectively, including itinerary details, images, descriptions, pricing, and availability information.

Tour Booking System

Front-end

There are two types of “Call to Book” types

CXXXII. Inquiry via user form with vendor: Users can send inquiries via a user form. Upon submission, the admin will share the member’s details with the vendor. Either a user or vendor can call to confirm the reservation. User can pay advance or full amount directly to vendor.

CXXXIII. Inquiry via “Plan Your Journey” user form with admin: User can send inquiry via a user form. Upon submission, the admin staff will interact with the user for further business. User can pay advance or full amount online.

Back-end

CXXXIV. Tour Inventory listing: For both type of “Call to book” tour confirmation or invoicing will automatically be email to user & admin.

Technical Considerations: Implement a real-time tour booking system that integrate with the tour operator’s availability and booking calendar.

Business Enquiry Management

Types of reservation frontend:

CXXXV. Vendor can list tours price per person and package pricing.

CXXXVI. Sightseeing and Multi-day Tour Pricing: Vendors can list yearly pricing day-wise pricing, vendors can offer various deals like early bird, last minute and other

special deals. Vendors can set conditions for purchasing deals, including duration and the total number of inquiries.

Tour Pricing

CXXXVII. Calendar date-wise pricing: All per person and per car pricing will be display on a monthly calendar. Vendors can display the lowest per person price in green and the highest in red. Vendors can block specific dates or mark them as sold out.

Technical considerations:

CXXXVIII. Implement a flexible pricing system that allows vendors to define different pricing structures based on various factors such as tour type, seasonality and group size.

Corporate Pricing

CXXXIX. Similar to hotel, the admin or vendor can offer rates/discounts on sightseeing tours, a multi-day's tours & fixed departure tours based on predefined corporate levels. When a corporate staff member logs in and makes a inquiry/booking they will receive the pre-defined corporate price.

Technical considerations: Implement a system for managing corporate pricing levels and automatically applying discounts to eligible bookings.

B2B Pricing

CXL. Similar to hotels, the admin or tour vendor can offer individual discounts to end number of sub-agents based on the promo-codes predefined to the sub-agents by the vendor. When a sub-agent logs in and makes a booking, they will receive the pre-defined sub-agent promo-code price.

Technical considerations:

Implement a flexible pricing system that allows vendors to define different pricing structures for sub-agents based on permanent promo-codes.

3rd Party Transfer

CXLI. On call to action, a user will be transferred to the desired 3rd party website. The platform services end here except for capturing the total number of actions.

Technical Considerations: Implement tracking mechanisms to monitor user actions and measure the effectiveness of 3rd party transfers.

Types of Travel Vendors & Landing Pages

Types of travel vendors and their products

CXLII. Domestic to Domestic Travel tours: A vendor dealing with the domestic market.

CXLIII. Domestic to International Tours: (outbound) A Vendor dealing with outbound business (where domestic user plan to travel abroad)

Vendor can load:

- CXLIV. Content, images, videos (fetched from You Tube), logo loading.
- CXLV. Create, copy & paste and download (PDF) itinerary day-to-day activities data.
- CXLVI. List Tour USP points & features.
- CXLVII. List Your Name, number of days, category of hotels, transport type, silent features of the tour, option of payment plan, meals plan, regular & seasonal price & discount.

Technical considerations: Design the vendor platform to accommodate different types of tour vendors and their specific product offerings.

Price Management

The Tour pricing is the same as the Hotel Pricing.

Technical considerations: Implement a flexible pricing system that allows vendors to define different types of pricing structures based on various factors such as tour type, seasonality, and group size.

Deal Listing Page

Same as Hotels, Vendors can create Weekdays, Early Bird, Last Min & Off-season deals with pricing. USP of the tour and terms and conditions. Same as Hotel, vendor will have option to either display his deal within his page or under Deal section displayed on Home Page.

Technical Considerations: Design the deal listing page to showcase various deals and their terms and conditions.

Plan Purchase & Invoicing

- CXLVIII. Same as hotel

All Enquires list Page

- CXLIX. Same as hotel

Competitor Pricing Page

- CL. Tour competitor pricing: Admin will capture list & display product pricing base on category, destination and type (sightseeing & multi-day)

Technical Considerations: Implement a system for capturing and displaying competitor pricing information, ensuring data accuracy and relevance.

Stat Reporting Page

- CLI. Stats Report of total visitors and their behaviour across all vendor display locations on the website.
- CLII. Search Views, No of inquiries, downloads, Landing Page views, Bounce back.

CLIII. Marketing tools Performance: Video Campaign views, promoted listing views, upper class views, premium economy, economy & lower economy views, world of kids& others.

CLIV. All above stats will display a list top to top – to bottom performing tools.

Technical considerations: Implement data analytics and reporting functionalities to provide vendors with comprehensive insights into their performance on the platform, including user behaviour, marketing tools effectiveness, and competitor analysis.

Promotional

- Design to create promo-codes offers, cashback deals, theme-based deals, early bird deals, last-minute deals, off-season deals, integrated with email & whatsapp.
- All promo codes have a cut-off date and several inquiries/vouchers.
- Users can download deals via email and whatsapp

Shopping, Restaurant, Airlines & Ticketing Agent

Authentication

CLV. Shopping Restaurant, Airlines & Ticketing Agent Registration

CLVI. The business registration process is similar to Hotels and tour vendors

Details of Pages

Shopping – There are 3 types of shopping product pages.

Type 1 Page - Fashion product Page

Type 2 Page - Artisans & NGO'S.

Type 3 Page – Sculptures & other designers.

Categories:

Artisan & NGO's, Fashion Boutiques, sculpturers, shops, Malls and Art Gallery.

Sub-categories: Refer Figma Designs.

Usage: Vendors can upload product and create promotional deals, promo-codes and offer workshops. All promo codes have a cut-off date and several inquiries/vouchers. Users can download deals via email and whatsapp.

Restaurant – 2 types of restaurant product page

Type 1 Page – Regular Restaurant Page

Type 2 Page – For street vendors.

Airlines Page 1 type of airline page for all domestic & international airlines

Ticketing vendor – 1 type of ticketing vendor page.

Technical considerations: Implement a user-friendly interface for vendors to upload and manage their products, including features for creating and managing promotions.

Usage: Vendors can upload product and create promotional deals, promo-codes and offer workshops. All promo codes have a cut-off date and several inquiries/vouchers. Users can download deals via email and whatsapp.

Vendor Login Pages

Dashboard: Display vendor ID & Date of Joining.

Performance display: Total visitors, inquiries, voucher downloads & 3rd party transfers.

Marketing tools performance displayed in a graph.

Common Message Screen: Same as in Hotel and Tours

Management Details Page

Same as in Hotel and Tours

Business Details Page

Same as in Hotel and Tours

Business Type Page

- CLVII. Display fields for single/multi branches with their type.
- CLVIII. All are registered independently but listed under one main ID umbrella account.
- CLIX. Note: All deals & coupons are managed from single login.
- CLX. Technical considerations: Design the system to accommodate both single and multi-branch businesses, allowing for centralized management a reporting.

Product Page

- CLXI. Technical considerations: Design the product pages to showcase products details effectively, including images, descriptions and pricing.

Promotion Offers

- CLXII. Promotion and packages:
- CLXIII. Design to create promo-code offers, cashback deals, theme-based deals, integrated with email and WhatsApp.
- CLXIV. All promo codes have a cut-off date, and several inquiries/vouchers.
- CLXV. Users can download deals via email and Whatapp.
- CLXVI. Technical consideration: Develop a flexible system for creating and managing various types of promotions, including setting validity periods and usage limits.

Special Occasion Page

- CLXVII. Day wise Birthday & Anniversary of members listing shared with vendors by admin
- CLXVIII. Vendors can send invitations and greetings to members and offer discounts & deals via email and Whatapp.

Workshop & Exhibition Invitation

- CLXIX. Workshop Invitation: Artisans and designers can load a venue promoting their workshop event with an inquiry form.
- CLXX. Technical considerations: Design the workshop invitation module to capture event details and facilitate inquiries form interested users.

Listing of Marketing Tools

Refer Figma Design

Technical Considerations: Design the platform to accommodate various marketing tools and their functionalities, allowing vendors to select and purchase tools based on their business needs.

Marketing tools Purchase & Invoicing

- CLXXI. Admin will be able to create, modify & delete a tool.
- CLXXII. All marketing tools have a payment plan option: one month only, Annual, paid monthly or annual prepaid.**
- CLXXIII. Vendors can choose one or more than one tools**
- CLXXIV. After selecting the plan & tool an auto generated invoice is generated.
- CLXXV. Vendors can pay on-line
- CLXXVI. Admin sends a notification of the purchase to the vendor & admin with the invoice & details.

- CLXXVII. Technical consideration: Create a complete tool pricing management, implement a secure online payment system and integrate it with the invoicing module.
- CLXXVIII. Listing of Tool Pricing - Admin will manage & monitor listing of tool pricing for all vendors categories based on type of cities – The tool pricing list will have base price, selling price, profit margin percentage, YOY.

Workshop Invitation

- CLXXIX. Workshop Invitation: Artisans and designers can load a venue promoting their workshop event with an inquiry form.
- CLXXX. Technical considerations: Design the workshop invitation module to capture event details and facilitate inquiries form interested users.

Restaurants & shopping

Based on IP addresses need to display marketing ads of suppliers (shopping & restaurants) offering sightseeing of a particular city when a member arrives in that particular city captured by its laptop & mobile phone IP address.

Guide Enrolment - pending

Festival Alert Banner – Admin will have 2 types of events lists – B2C and B2B list.

- i. B2C list admin will be able to list & update alerts of festivals, events & important dates city wise. The alert will get flashed on frontend pages (city page & grid pages)
- ii. B2B list will have same alerts of festivals, events & important dates, admin will flash alerts either collectively or individually to vendors. The message will get flashed on their dashboard.
